

# Lunette Removal Tool

**Faster.**

The Lunette Removal Tool is attached to the lunette ring. The transverse sliding weight is moved against the lunette ring.

**Safer.**

Rapidly moving the transverse sliding weight until it contacts the stop ring provides a direct force impulse that frees even the most stubborn lunette.

**Better.**

**By Design.**

The Lunette Removal Tool provides *faster, safer* removal of an existing lunette ring.

## PROBLEM:

Lunette rings become “stuck” due to rust, dirt, or abuse. Ordinary methods (torches and sledges) are slow, can damage ring, and may cause injury.

## SOLUTION:

The Lunette Removal Tool is the most effective method because it applies direct axial force exactly where it is needed. The precise and controlled application of force improves safety.

This self-contained unit is safer than swinging sledgehammers or using torches.

## **Product ordering information:**

Cage Code - 1QGK3,  
Kit Number - 57K5096.

*Designed to perform a critical task faster and safer, the Lunette Removal Tool is manufactured from durable alloys that meet or exceed demanding military requirements. The Lunette Removal Tool has proven to be effective by the US Army. A convenient storage cart is provided for the tool and attachments.*
