

M200 Landing Leg Kit

Faster.

Safer.

Better.

By Design.

**Current M200 Generator Trailer
Landing Leg (deployed)**

**Operating sequence of the M200A1
Generator Trailer Landing Leg Kit**

The M200A1 Generator Trailer Landing Leg Kit from Williams Innovations, LLC makes connecting or disconnecting the M200 trailer a simple one-person operation. Like all products, it is easy to use, easy to install, and easy to maintain. Faster. Safer. Better. By Design.

PROBLEM:

Raising or lowering the landing leg on the M200A1 Generator Trailer is a time-consuming process that requires a soldier to lie under the trailer, operate latches, and lift (or restrain) the leg. This can lead to muscle strains, pinched or severed fingers, or possible head injuries.

SOLUTION:

The M200A1 Landing Leg Kit from Williams Innovations, LLC provides a total solution to the problems described above.

One soldier can safely raise or lower the landing leg **with full control**. Further, the soldier operates the kit standing **beside the trailer**, NOT lying under the trailer.

The process of raising or lowering is much faster and safer, meaning better productivity for soldiers and a safer operating environment.
