The TeleSwivel™ Hitch has revolutionized trailer attachment. Attached to either the trailer tongue or tow vehicle, the TeleSwivel™ makes attachment faster and safer by moving the hitch – not the vehicle!

PROBLEM:

Alignment of the tow vehicle with the trailer tongue is time-consuming, requires a high degree of precision, and can cause serious injury if the driver attempts to lift the trailer into position to overcome misalignment.

SOLUTION:

The TeleSwivel™ extends 7" from its secured position, and swivels 7" to each side. This means that it is up to 15X easier to align a tow vehicle and trailer. Once connected, it is a simple matter to secure the TeleSwivel™ in position. The trailer never moves.

The TeleSwivel™ comes in two basic models:

- Tow Vehicle Bumper Mount
- Trailer Tongue Mount

Each of these models may be further customized with features like the Adjustable Height version shown to the left.
