

# Faster, safer towing.

**Faster.**

TeleSwivel™ hitches and lunette ring assemblies from Williams Innovations make hooking up a trailer over twice as fast with a tongue that extends and moves side to side, providing a target 15 times larger than a standard lunette ring. After attachment, it is an easy matter to engage the lock pin and drive away.

This unit will replace any standard bolt-on hitch or bolt-on lunette ring.

**Safer.**

Landing Leg Assist and Lift Kits use applied leverage to enable a single soldier to safely and easily secure and deploy landing legs on six trailers or trailer families: M103, M105A2, M112, M149A2, and M390C.

The TeleSwivel™ Hitch and Assist/ Lift Kits can often be combined into a complete towing improvement solution for a trailer.

**Better.**

The Lunette Removal Tool is a linear slide hammer that makes removal of lunette rings a simple, fast, safe task for a single soldier.

Installation of these products can easily be performed in the field or motor pool.

**By Design.**
